

## ARMORSTONE COLOR TINT GUIDE

### Note:

If you don't tint both the primer and the ArmorStone, since the ArmorStone is semi-translucent you may experience a lightening of the surface or you may need more material to cover the lighter-colored primer. We strongly suggest that you test a small area first on a board or test area prior to application to achieve desired results.

### IMPORTANT:

Minor color fluctuations may occur during tinting. Mix product from different sized containers/product purchases to ensure color consistency.
